

California By Jennifer Denrow **California kindergarten standards checklist** Using image repetition as a tool to emphasize obsessions Denrow's narrators range from a woman fixated on California to a ventriloquist and his dummy that instructs You're allowed to move your lips.

**California closets** The opening lines of the poem state this mission well enough: "Forget Your life Okay I have Lay down something that is unlike it Sold boat Italian song" The poem goes on for 19 pages and it continues to expand beautifully and elliptically on the abstract idea of California as a stand-in for satisfaction exotica and adventure in our everyday lives which find themselves dulling more and more as computer slowly remove the very essence of living from many situations.

**California poetry quarterly** Jennifer Denrow This book is not the kind of poetry I tend to read less lyrical image heavy more conversational and figurative but I found myself enthralled turning page after page.

CaliforniaAct 1 had the poem "California" which was unique. Jennifer Denrow My girlfriend has never been to California. "We'll go there someday. I'm doing my little bit to change that. The title poem "California" is my favorite piece of poetry. "California" is broken up into three sections. The first is a long poem titled "California." This is the gem of the book. The second section consists of more traditional shorter verses. This section like many poetry collections is rather hit-or-miss. This section struck me as too avant-garde. It doesn't matter though.
